

Installation Services

In line with our market leading physical migration approach, Technimove provide installation services on an international basis.

Ranging from a single site install to an entire global rollout, our strong reputation for delivering excellence has resulted in the world's leading Data Centre providers and a further 5,000 enterprise organizations, utilizing our installation services globally.

With our purpose-built state of the art storage facility, we have significantly enhanced our capabilities, with on-site imaging and build suites as well as rack and frame build suites for larger devices. Additionally, we offer temporary pop-up hub for clients to work from for ad-hoc projects.

This proves useful for when our clients need to create a test environment but do not have the capacity, space or power to do so in their own facility.

The Technimove Advantage

- Support vehicles/critical equipment vehicle split.
- Standby to rollback resource.
- Equipment insured with no upper limit.
- High security measures such as security tags, seals and GPS tracking.
- Purpose built server flight cases and patented anti-static rack jackets.
