

## Penetration Testing

Penetration testing is most often conducted by businesses out of necessity for audit purposes and is completed once a year in line with their audit. This approach provides a point in time snapshot of the state of security and any remediation work required to mitigate vulnerabilities. As new servers are deployed, or development updates rolled out to a web application, the platform risk has ultimately changed. Best practice guidelines state that one penetration tests every 6x months will provide a hardened security posture and better baseline to mitigate potential cyber attacks.

Our CREST certified consultants will assess your organisation’s external and internal IT footprint. We will report on such things as unpatched systems, possible forgotten or legacy devices, devices with weak usernames and passwords as well as other factors which would be of interest to malicious hackers.

### Our testing methodology

Our testing methodology is as follows:

- [Pre-Assessment Meeting](#)
- [Network Reconnaissance](#)
- [Target Identification](#)
- [Segmentation Verification](#)
- [Vulnerability Assessment](#)
- [Privilege Escalation](#)
- [Data Exfiltration](#)
- [Post-Assessment Meeting](#)

### Technical Delivery

Supporting clients with business service assurance, operational readiness and service availability.
